

## MT4 installation manual for Android

To install the Metatrader 4 on your mobile phone with Android operating system, you should:

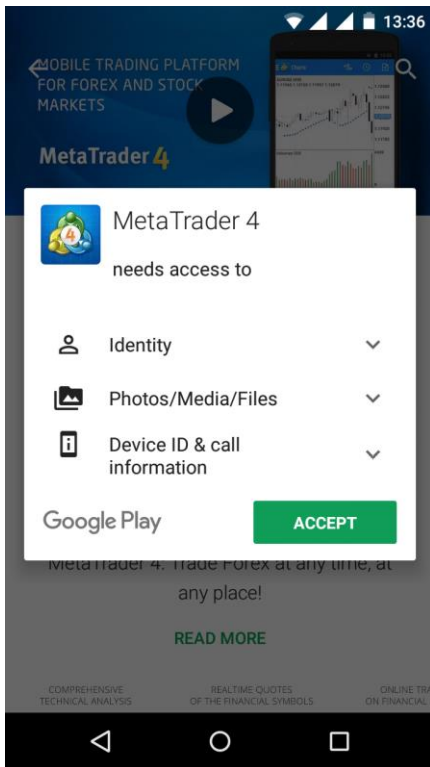

1. Log in to the Google Play app and type the query "Metatrader 4" or "MT4" in the search box. In the list below select the application "Metatrader 4" by the "MetaQuotes Software Corporation" developer.

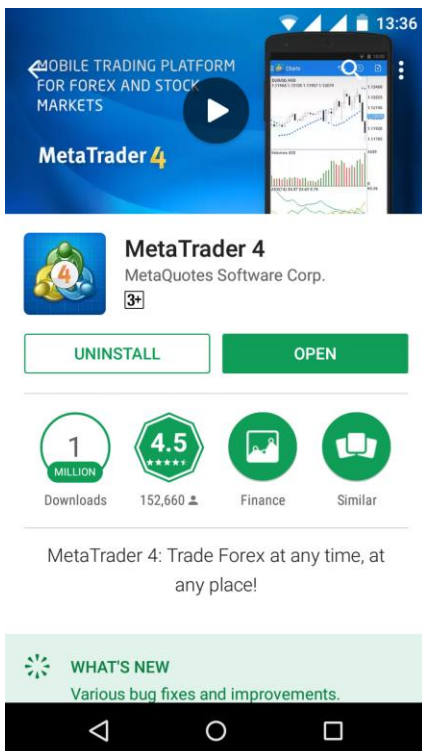

2. Next, you will see a window with a full app description, where you should click the button "Install".

- Then, you should read and accept the access permission terms, and then the app installation process will start.

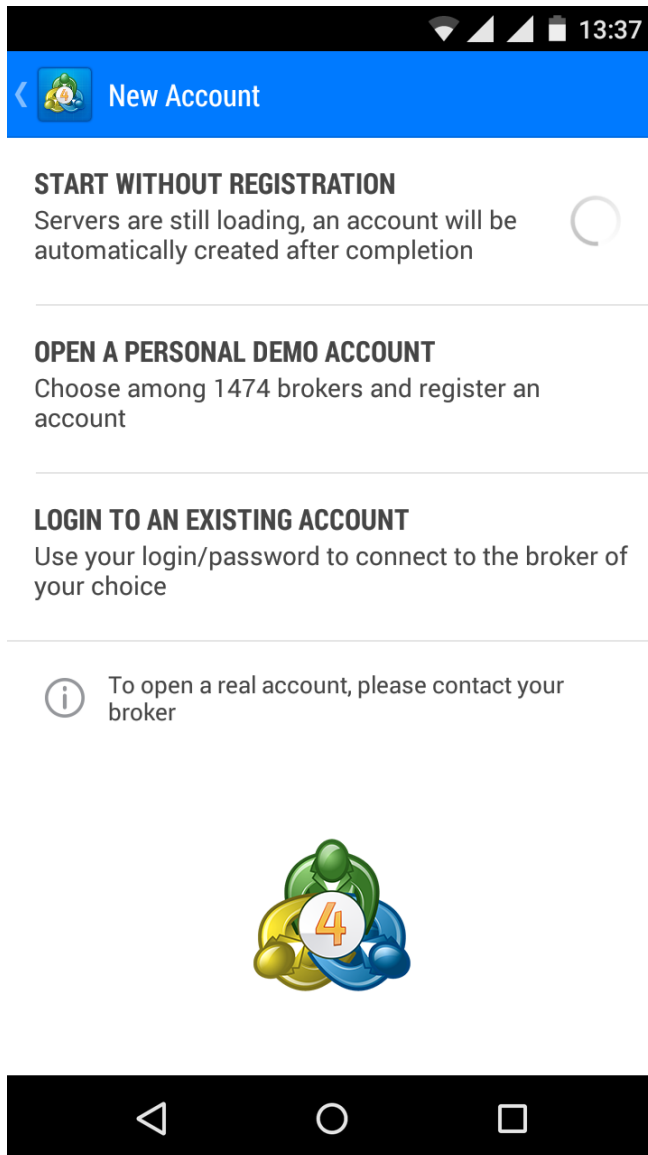

- After the installation, open the Metatrader 4 app.

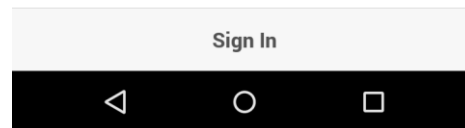

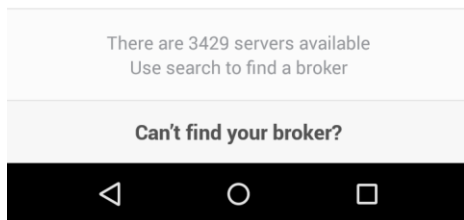

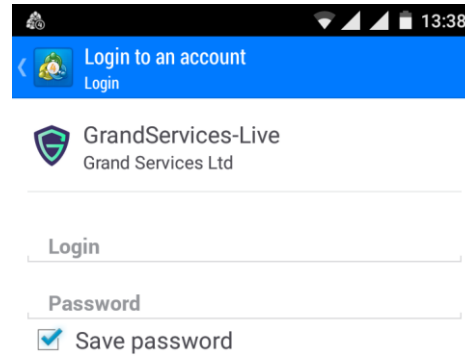

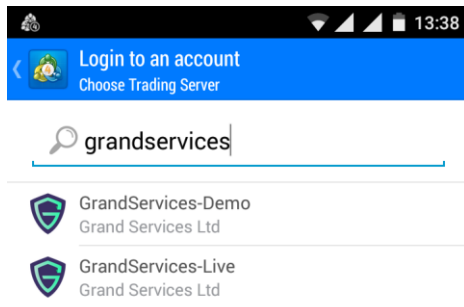

5. Next, you'll see the Metatrader 4 window, where you should select the option to login. Here you can enter an existing real account by selecting the option "Connect existing account", or open a new demo account in the ForexGrand.

If you haven't a live trading account yet, [register on ForexGrand](#) and after that you'll receive a personal login and password on your e-mail.

6. To connect to an existing account, find a GrandServices trading server (1) and enter your personal login and password (2). After that, you can start working in Metatrader.

7. Now, you can view your account status and manage your trading operations in Metatrader 4 from your smartphone.
